John Lacyk
US Patent Examiner
USPTO
Washington, DC

Dear Mr. Lacyk,

This communication is a priority certification of our telephone conversation this date reference you having found the 'missing' corrected claim relating to patent application **#10627286 "Electromagnetic Brain Animation"**. In said conversation also stated was that these 'found' claims would be scanned and put back into the order they would have been situated had they been properly received when sent '**certified mail**' some seven [7] months ago. In addition, there would be an attempt to give a higher priority timetable toward final 'allowance' for completed US patent ownership.

Please note enclosed within this certified communication - a copy of fax sent to your attention on November 10th, 2006. This is simply for the purpose of, again, allowing for a broader prospective of the storyline and importance attached to our 'utility' EBA mechanism which has been in the application process for coming up on four [4] years.

Thank you for your continued assistance in this '**priority**' matter. All relevant staff at **BRI** have been asked to be on call to give assistance to yourself and/or anyone else at **USPTO** on a continual basis and we will also contact you regularly until this matter is satisfied and completed in a positive fashion.

COVER & INFORMATION SHEET

Attention: Patent Examiner John P. Lacyk
November 10, 2006

Dear Mr. Lacyk:

This is simply a 'paper trail' documentation of our recent telephone conversations [Nov .8, 2006] in addition to multiple attempts and messages left for several days in a row previous to said conversation. The topic at hand are the '**missing**' and/or **lost**' corrections to claims 1 through 32 in relation to patent application number **10/627/286**. Our documentation indicates that there is absolutely no doubt whatsoever that the 'corrections' were sent on April 24, 2006, received on April 25, 2006...and telephone records indicate I spoke by phone to both you and another individual on the 27th and 28th of that same month verifying that proper procedure had been carried out and the 'new and corrected' claims would begin examination scrutiny in about 4 months. We also have in our possession a minimum of five **[5]** additional faxes sent to your attention *after* arrival of 'corrections' concerning normal questions and answers relating to the topic at hand.

The importance of the positive resolution of the 'mishap' cannot be overestimated. **Electromagnetic Brain Animation** generation patent approval request has been at **USPTO** for nearly four **[4]** year. We here at the **Behavior Institute** had fully expected to receive notification from the Patent Office at any time giving indication of final and full approval. Now we find that our final patent data has been 'lost' for more than 6 months.

Please allow a small example of the unique importance of our **EBA** mechanism: The **National Aeronautics and Space Administration** signed an exclusive agreement with the **Behavior Research Institute** [more than a year ago] so that we might share all similar ideas and workings with each other under 'top security' conditions leading to an ongoing financial involvement relating to a considerable amount of funds. In addition, one of **NASA's** top biotech scientists, with our permission, took a complete breakdown of the potential workings of '**electromagnetic brain animation**' to an international symposium held in Japan. After two days of pouring over all notes and documentation, six **[6]** of the most highly respected minds in the 'electromagnetic/ultrasonic' field came to the unanimous conclusion that not only is **EBA** a completely workable innovative mechanism; its potential in the field of mental illness could result in a breakthrough not seen in more than fifty **[50]** years. [This small bit of information continues to be given in the utmost of confidence and security]. I only took this time to give you some small idea relating to the critical nature of our current situation. It would be so great if we do, in fact, find those missing 'corrections' as soon as is humanly possible. I will call you again either Monday afternoon or Tuesday morning.

Thank you again for all your help in this most urgent matter.
